

Carbon Management and Compliance

CRC Carbon Trader

A robust carbon trading platform for the Carbon Reduction Commitment

Green 2020 introduces the CRC Carbon Trader, a carbon management software application specifically designed to manage the requirements set forth by the Carbon Reduction Commitment (CRC) in the United Kingdom.

Offering Overview:

- Complete management of trading and compliance liabilities:
 - ✓ Capture energy data for carbon planning and reporting
 - ✓ Translate energy data into a single, integrated allowance trading position
 - ✓ Accurately transact allowances and minimise risk of penalties

Technology:

- Deploy and save: Quick-Start implementation through hosting at secure data centre
 - ✓ On-site installation, or Software-as-a-Service (SaaS)
 - ✓ Utilises Microsoft Silverlight, internet technology leader

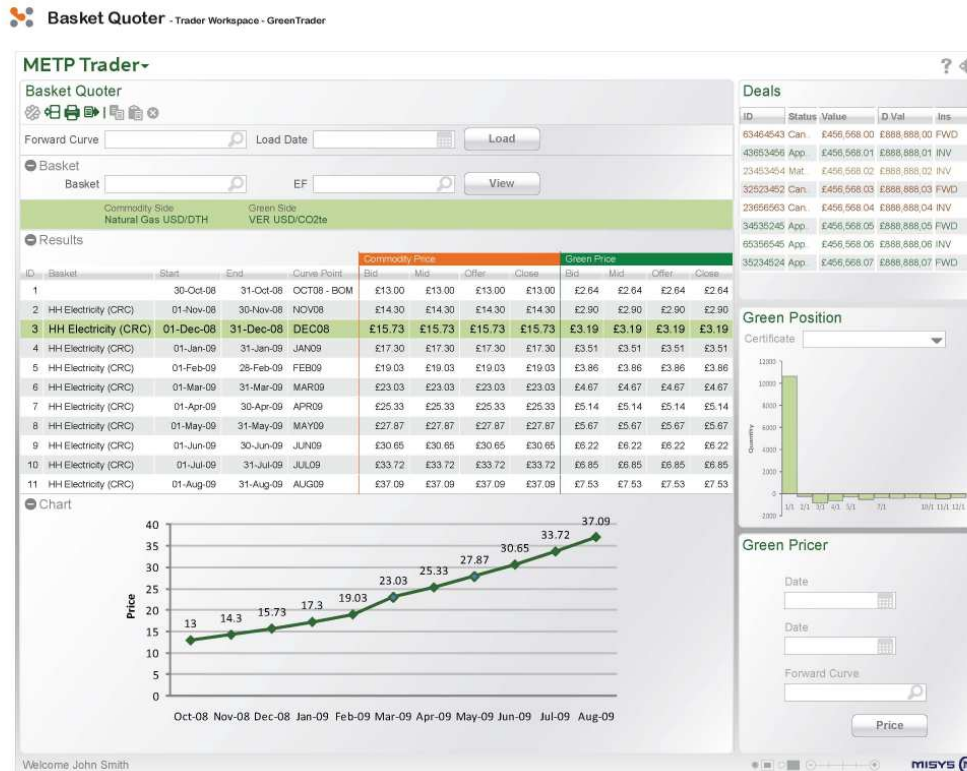

The Solution: How CRC Carbon Trader Can Help

To help organisations measure carbon liability and participate in the CRC allowance market, Misys, a World leading finance services software development company, has developed this powerful CRC carbon management and allowance trading system.

A web-based software application, CRC Carbon Trader gives organisations complete management autonomy over trading and compliance liabilities. The application—which can be used for data collection, carbon planning and liability calculation throughout the initial stages of compliance—provides organisations with a complete solution for managing all the CRC requirements.

The software can also be easily integrated into an organisation's current enterprise system using the Misys Quick-Start Implementation Consulting Service.

CRC Carbon Trader features accurate management of carbon liability tracking and allowance trading.

Carbon Foot printing, a legal requirement

In conjunction with CRC Carbon Trader, Green 2020 can also provide Carbonalysis, a web based Carbon foot printing data collection and data analysis tool for CRC organisations that will be required to report their Carbon footprints as part of their legal obligation under the CRC scheme. A fully hosted system, Carbonalysis speeds up the data collection and analysis required to report and measure footprint reductions but also provides an ideal platform from which to measure the success of a carbon management programme.
