

Green 2020 Environmental Management Service can be categorised into the following 8 key areas:

1. Energy Management

- Auditing of current energy consumption
- Building certification and display certificates DECs and EPCs
- Procedures for the monitoring of energy consumption
- Cost benefit assessment of technologies to reduce consumption
- Data centre: Infrastructure efficiency assessment and benchmarking
- Data centre: Infrastructure efficiency audit.
- Data centre: Design and ongoing management using Green Grid principles for measuring power usage effectiveness and data centre efficiency.
- Facilities Management: the energy consumption within a building: from Energy audits & surveys, to thermographic surveys to Low & Zero-carbon energy solutions.
- Assessment of renewable energy providers
- Assessment and design of carbon offsetting schemes

2. Carbon Reduction

- Development of a bespoke carbon foot printing tool specific to the activities of the company
- Development of a carbon management programme
- Data collection, recording and reporting of ongoing carbon reductions.

3. Environmental Management

- Environmental Policy / Statement: Scoping, writing and periodic update of the corporate environmental policy.
- Installation of an Environmental Management System: Implementation of environmental management systems and preparation for third party audits e.g. ISO14001.
- Identification of Key Performance Indicators and the setting of time related targets.
- Data collection, recording and reporting procedures

4. Green Office Procedures and Tools

- Design and implementation of an office based environmental improvement strategy to cover all consumables, house keeping, social areas and transport planning

5. Waste Management Systems

- Review and audit of all wastes, followed by a planned strategy to reduce, re-use and recycle.
- Development of a generic Waste Management System for use at all company locations.

6. Supply Chain and Purchasing

- On line supplier carbon footprint measurement tools
- Database access of supplier carbon footprint measurements and environmental performance indicators
- Online supply chain carbon management platform for measuring performance across the entire supply chain.

7. Cultural and Behavioural Change

- Strategic development of the company: Assessment of how well the company is responding to climate change risks and provision of a strategy for further development. This can also include identification of the exact needs for behavioural change.

8. Training, Internal Training Programmes/Award Schemes and provision of content for intranet

- Identification of training needs (all levels including senior management)
- Development and implementation of internal training programmes (all levels)
- Development and implementation of an internal environmental award scheme
- Development of the internal communication of environmental management systems
